

DECLARATION OF COMPLIANCE

This is to certify that Amala Institute of Medical Sciences has a well-established hospital fire and safety management system in place. We are committed to ensuring the safety of our patients, staff, and visitors.

Fire and Safety Protocol

We maintain a comprehensive fire and safety protocol, also known as a safety manual. This manual outlines our procedures for preventing fires, responding to fires, and evacuating the building.

Employee Training

We provide regular training for all employees on fire safety procedures. This training includes classroom instruction and hands-on practice with fire extinguishers. We also conduct mock drills to ensure that everyone knows what to do in the event of a fire.

Third-Party Audits

We have our fire and safety management system audited by a third party on a regular basis. This helps us to ensure that our system is functioning properly and that we are meeting all applicable fire safety codes.

Fire Safety Measures

We have taken steps to ensure that our facility is safe in the event of a fire. These steps include:

- Posting adequate exit labels throughout the building
- Having well-marked assembling areas for evacuation
- Maintaining an adequate number of fire extinguishers, as required by fire safety regulations

We are committed to maintaining a safe environment for everyone at Amala Institute of Medical Sciences. Our well-established hospital fire and safety management system is an important part of this commitment.

Parameter	In Amala
Fire extinguishers	More than 300
Exit labels	More than 500
Fire assembly points	5
Surveillance camera	More than 500
